[PowerShell Code Repository](#)

Our Terms of Service

First: we will always give you 30 days notice and allow you to remove your data if we change our [privacy policy](#) or [terms of service](#).

PoshCode exists as a free repository of PowerShell code snippets, scripts and modules. Our goal is to build a repository of free PowerShell scripts, modules and code snippets. These terms are intended to support that goal. For all contributions we require that you make certain assertions:

You assert that all content submitted by you belongs to you: that you wrote it yourself and/or have copyright and publication rights to share it under these terms.

Dissallowed content

Illegal Activities. *You agree* not to post content which has no reasonable use other than illegal activities, including gambling, cracking, or hacking.

Offensive Content. *You agree* not to post content that is offensive, defamatory, obscene, abusive, invasive of privacy, or otherwise objectionable.

Harmful Activities. *You assert* that all content submitted by you is free of adware, spyware, viruses, and other malware.

Additional Terms For Scripts

Unless you *apply a specific license* to a script by stating it in a comment header in the script, *you agree* to release any code uploaded to this site under the [Creative Commons "No Rights Reserved" license](#). That is, you agree to waive all copyright and related rights in your script in accordance with the Creative Commons "No Rights Reserved" license available here: http://creativecommons.org/publicdomain/zero/1.0/legalcode That is, you agree to [place your code in the public domain](#).

Don't get us wrong: we love open source, and we aren't opposed to reciprocal open source licenses, but we strongly believe they are the *wrong model* for a script community. Here we must not only *reuse*, but more importantly, we must be able to *remix*, and so we require the use of licenses which are easy to remix and re-use. *We strongly encourage you to use the public domain dedication for your scripts*, but we request that if you choose to provide license terms, you choose a *non-reciprocal* [open source](#) license.
